I work at the front of the product process: find the real problem, test it with the people who have it, then **build and ship it**. Two of the projects below are live and public, source on GitHub.

SELECTED WORK

Calm Navigation Companion — live product

2026 — live

Solo — defined, designed, built, shipped, maintained · calm-navigation-companion.pages.dev

- Walking navigation that routes for calm rather than speed, for people who find crowds and traffic noise draining. Installable PWA, no account, public.
- Vanilla HTML/CSS/JS on Cloudflare Pages; routing API proxied server-side through Pages Functions so no key reaches the client. ~15k lines, open source. Reading my own code back afterwards found a client-side key, a silently failing visualiser and a stale service-worker cache. All three fixed. No user research yet — the demand is untested.

The Return Gap — deposit containers and street waste

2026

Solo — research, concept, business model · Amsterdam

- Identified the mechanism behind the problem: the mess is what a **failed search** leaves behind. A bag is opened to find out what is inside, and usually there is nothing.
- Eight street interviews, direct observation, and twelve physical interventions benchmarked across two countries — all of them acting on the public bin. Concept: catch the containers at the front door instead. Proposed; the pilot has not been run.

Purylock — smart drying locker

2025 – 2026

Product manager · brand partner project via my degree · Dutch weather-gear brand

- Reframed an open brief from rain protection to **post-rain recovery**. Discovery interviews put the whole pain at one moment: arrival.
- A shared drying locker for buildings, with costed business-model options. Completed as a course deliverable.

GrandPod — voice device for isolated older adults

2025 – 2026

Concept and validation · team of six

- Made the case against building an app: the users are defined by digital exclusion, so the interface itself was the barrier. Argued for voice-first, AI in the background, a verified human on the other end.
- Enacted with older adults using a cardboard prototype and a stand-in phone menu, then assessed live. I built a browser MVP afterwards, now public.

EDUCATION

BA Business Innovation

Sep 2025 – 2029

Amsterdam · taught in English

- Product development, user research, business models, innovation management.

SKILLS

RESEARCH	Discovery interviews · desk research · field observation · problem framing · journey mapping · competitive benchmarking · user validation · evidence synthesis
CONCEPT	Concept development and selection · prototyping and concept testing · Business Model Canvas · pitching
BUILDING	HTML, CSS, JavaScript · Git and GitHub · Cloudflare Pages and Functions · PWAs and service workers · accessibility to WCAG AA · working fluently with AI coding tools. Two products live, both maintained by me.
LANGUAGES	Italian (native) · English (fluent) · Dutch (developing)
